Nordic Live Productions Oy
28.7. - 30.7.2017
- Volunteered as a ticket inspector

LANGUAGE

Finnish - Native   English - Fluent

PROJECTS

Pokedex Randomizer   ↗ [Preview](#)   </> [Code](#)
Bootstrap | Javascript | HTML | CSS
Objective:
- Learn how to use Bootstrap
- Improve Javascript skills
- Learn how to utilize external API

Result:
- Learned to exploit Fetch to get information from external API.
- Made website responsive with Bootstrap.

MarjaGo   ↗ [Prototype](#)   ↗ [Figma](#)
UI / UX Design
School project where I had a chance to collaborate with 7 people to create UI / UX design for berry and mushroom picking mobile app.

My Role:
- Had the pleasure to design everything with Figma since team members didn't have any prior experience with designing tools such as Figma.

Challenges:
- How to regulate false/accidental berry spots that users leave. For example, the berry is named Blueberry when it should be Blackberry.
- How to reduce mistakes that users make when writing. For example when writing berry species or when writing the degree of ripeness of the berry.

My solutions to challenges:
- Reporting false/accidental spots made easy as possible: User clicks report button on berry post and the information about the post gets copied to report screen. Then the user may include additional info and click send.
- The use of dropdown menus reduced mistakes and also made adding new berry spots much faster.

Art Store   ↗ [Preview](#)   </> [Code](#)
HTML | CSS
Objective:
- Learn how to make responsive websites with CSS.

Result:
- Learned about Flex, Grid, and Media Queries to make the website responsive.
